

SPRINT 1.5 SURFACE AERATOR

“Aerate your water body efficiently with a Sprint 1.5”

The SPRINT 1.5 is a surface-mounted aerator which oxygenates and destratifies by drawing water through a central column and dispersing a plume of water skyward.

The propeller design allows for dispersal of water both vertically and radially, enabling a greater volume of water to be dispersed into free air, facilitating a more efficient transfer of oxygen to water. Positioning is carried out by tethering from each of the unit’s four corners to static points on a lagoon bank.

Key Features

- Surface-mounted aerator that oxygenates and destratifies your water body, while providing a beautiful visual display.
- Sprint 1.5’s can be customized with lights, to add an interactive aspect to the display.
- Propeller design allows for dispersal of water both vertically and radially, enabling a greater volume of water to be dispersed into free air.
- More efficient transfer of oxygen to water than other aerators.
- Easy to maintain.

Technical Data

Supply Requirements (V)	Rated Power (HP)	Rated Power (KW)	
240 Single Phase	1.5	1.1	
415 Three Phase	1.5	1.2	

Rated Current (A)	Flow Capacity (Lpm)	Vertical Dispersion (m)	Radical Dispersion (m)
5.0	1250	1.7	6.5
2.0	1250	1.7	6.5
